Open to relocate

with 6+ years running rigorous, end-to-end studies in a complex enterprise environment and agentic data-platform. **Sole research owner** for a highly technical product area, **leading cross org studies** on **AI-agent-ready experiences** where automation should, and shouldn't take control, **building research foundations** (JTBD, persona) that ground design and product decisions.

EXPERIENCE

Cisco (Appdynamics & Splunk), San Francisco, CA (2020 - now): Senior User Researcher

Enterprise APM tool and data platform · sole research owner for the data management domain

- **Lead researcher for agentic data experiences** built AI trust & automation framework, a "co-pilot, not auto-pilot" model across 5 personas showing trust is calibrated by task complexity, data sensitivity, and reviewability; used to focus teams on the highest trust & automation opportunities and shaped GA roadmap for agentic onboarding across 2 product teams.
- **Sole data management domain researcher** built the platform's foundational research library (JTBD, personas, journey maps) from scratch over a one year research roadmap, now the reference source for product and design decisions.
- **Scaled research capacity with AI tooling** built AI research agent, knowledge wiki, and reusable research skills and templates that reduce research operations time and extend research support beyond core research.
- **Established a cross-org research enablement program** hosted 26 workshops and 40 mentorship sessions, enabling 20+ designers to independently run their own design-feedback focus groups and build cross-org relationships.

Salesforce (Trailhead), Remote (2020): UX Researcher Intern

Salesforce's e-learning platform

- **First researcher on the team** scoped and ran agile qualitative studies and provided the design team its first structured view of user pain points and use cases, driving immediate design prioritization.

Google (Google Express), San Jose, CA (2017 - 2018): Operations Data Analyst

Online shopping and delivery service with local retailers (now Google Shopping)

- **Blended qualitative and quantitative methods** surveys, quantitative data analysis, contextual inquiry, shadowing, to model operator behavior in a new logistics system and drive data informed operational improvements.

RESEARCH PRACTICE

End-to-end study ownership from opportunity framing through synthesis and stakeholder activation; research roadmaps aligned to product maturity. Mixed-methods design integrating interviews, contextual inquiry, usability testing, surveys, and product analytics for triangulation. Cross-functional partnership with Product, Design, and Engineering; stakeholder management and executive readouts tied to roadmap decisions.

Research Methods: Qualitative research · Quantitative research · User interviews · Contextual inquiry · Diary studies · Usability testing (moderated & unmoderated) · Concept & prototype testing · Tree testing · Card sorting · Co-design · Design sprints · Workshops · Surveys · Heuristic evaluation · Competitive analysis · Jobs-to-be-Done (JTBD) · Journey mapping · Persona development · Thematic analysis · Affinity mapping

Domain Expertise: Enterprise SaaS/Cloud · B2B data platforms · APM/observability · Data management & governance · AI & automation

Tools & Platforms: Dovetail · User Interviews · Qualtrics · Pendo · Figma · Figma Make · Cursor/Claude/Codex · Custom research agents and internal knowledge wiki

Languages: English (native) · Chinese (native)

EDUCATION

- **M.S., Human-Computer Interaction & Design** — Indiana University, Bloomington (2019–2021)
- **B.A., Social Psychology** — University of California, Irvine (2012–2016)
